What is Microgrid Certification Training?

Microgrid Certification Training is a 3-day course designed for all engineers who want to learn, design, or operate microgrids. It is also suitable for power traders to understand modern microgrid technologies and independent system operator personnel. The training covers understanding energy management systems (EMS) in microgrids, including centralized or decentralized microgrids.

What is included in microgrid training?

By taking this training, you will understand the microgrid concept, different approaches to controlling microgrids, microgrid operation modes, protection of microgrids against faults, benefits of microgrids in power systems, and microgrid different functionalities. WHAT'S INCLUDED?

What is Microgrid technology?

It is a small-scale power system with distributed energy resources. To realize the distributed generation potential, adopting a system where the associated loads and generation are considered as a subsystem or a microgrid is essential. In this article, a literature review is made on microgrid technology.

What are the studies run on microgrid?

The studies run on microgrid are classified in the two topics of feasibility and economic studies and control and optimization. The applications and types of microgrid are introduced first, and next, the objective of microgrid control is explained. Microgrid control is of the coordinated control and local control categories.

What is a microgrid energy system?

A microgrid is a self-sufficient energy system that serves a discrete geographic footprint, such as a college campus, hospital complex, business center or neighborhood. Within microgrids are one or more kinds of distributed energy (solar panels, wind turbines, combined heat & power, generators) that produce its power.

What is the micro-grid Academy?

The Micro-Grid Academy (MGA) represents an interesting case study of successful TVET actions in the sustainable energy sector in Africa. Born in 2018, the MGA started as a private sector-led initiative, managed by RES4Africa Foundation, to train the African workforce, mainly the youth, to professions in the renewable off-grid sector.
